

An Introduction to Software Science

What do we do

Software Science develops bespoke software to meet the specific requirements of our customers. The company was launched over 12 years ago to satisfy the market need for customer tailored software. Whatever your field, we want to provide you with software that is not only made to measure, but also cost effective.

How do we do it

- We have an initial meeting with you where you outline to us your requirements.
- From this we will produce a brief specification and estimated cost.
- On your approval, we then produce a functional specification based on detailed consultations with you and your colleagues.
- Once agreed, we develop the application, in close cooperation with you every step of the way. You will be able to see the system developing at all times.
- A period of testing and user acceptance follows.
- Then, when all is well, you can make it 'live'.
- It then comes under our support for as much or little help as you may need at anytime.

Why choose us

We do not sub-contract any of our work—everything is developed in-house.

You will always be dealing with the same people.

Some of our Clients have been with us for over 12 years!

Our fees are highly competitive—we win business in the US against US competitors and offshore companies (India & Eastern Europe).

We will have a mirrored system here at our site so that we will always be able to resolve easily any issues that you may have.

We operate across all major platforms using all the leading software tools. Whatever your needs, we guarantee we will work hard to meet them.

Our customers

We wanted to meet the very specific and varied needs of our customers - 'One size does NOT fit all'.

Our customers from all over the world are satisfied with our work, for they provide us with a high level of referrals, for which we are grateful.

We have successfully met the needs of specific industrial sectors and we can produce the right software for virtually any industry. We have a wide range of clients in both public and corporate sectors.

Our policy

Software Science will create and implement solutions for you that utilise the latest technology, where appropriate, for a quantifiable return on your investment.

First we make sure that we have a good understanding of your business. Then, by helping you integrate and streamline this, we will help you to keep ahead of the competition!

“...if your solution is made to measure, it will fit.”
